## Relevant Projects & Experience

### AspinRock – Web app May 2023 – Jul 2023

Commission project for a client: building an application for a financial services startup, mostly frontend work, with mail notifications support and internal CMS, allowing web owner to post updates & blogs.

### FameFusion – Web app Jun 2023 – Feb 2024

Working as a contractor for an external client in FameFusion, a startup that joins stars with their fans. I am in charge of the whole development: frontend using React, Tailwind & Redux, and building/maintaining of the server (for which I used GraphQL, Express, Mongo & Prisma)

### Ensolvers – QA Automation Engineer, Web Developer Jun 2023 – Mar 2024

Employed by Ensolvers, a US software factory, charged with delivering top-notch products for their clients. My role there, being that of assuring quality of products, developing manual and automated tests along with performance controls and CI/CD pipelines to handle these tests, and some web development work to fix some of the thrown errors.

### Colourly – Web App Jul 2024 – Mar 2025

Commission project for a client: a SaaS which allows user to create their own custom colouring book. They start by inputting a phrase, which then generates a 30-phrase story, and then gets turned into a full book. Still in a testing phase, users can edit their story, regenerate pages they don't like, and get their created book directly on their homes, printed in a top quality for their enjoyment.

To develop this project to its full potential, I needed to understand how OpenAI prompt generation and API worked, as well as Replicate API (the one we use to generate images). I've also integrated Stripe API for quick payments, and Lulu Print API to deliver book orders directly to users' homes.

### NexoSmart – Full Stack Developer Nov 2024 – Present

Currently employed by NexoSmart as a full-stack developer. In the front-end side, providing effective, good quality, SEO optimized results & and pixel perfect components, as well as working with mobile development using React Native. As from the back-end, I design and implement powerful and robust solutions to tailor our client needs, building systems that are solid across time, and optimized to be as scalable as possible, using mainly Laravel and MySQL.

## Skills

### Programming

JavaScript, TypeScript, HTML, CSS, Sass, Java, Python, Node.js, PHP

### Libraries and Frameworks

React, Next.js, Gatsby, Tailwind, Express.js, GraphQL, Redux, Cypress, Svelte, React Native, Laravel

### Databases and ORMs

PostgreSQL, MongoDB, Sequelize, Prisma, MySQL, Drizzle

### Tools and Platforms

Git, GitHub, Netlify, Vercel, Scrum, Heroku, Webpack, Figma, Trello, Adobe Photoshop

## Education

### Computer Science Degree

At UNS, currently pursuing and at my 3<sup>rd</sup> year.

## Languages

### Spanish

Native Speaker. •

### English

Learning since I was 6-years-old. Cambridge First Certificate of English (B2) in 2018. EF SET English Certificate (C2) in 2022.
